

THE LEFT AND RIGHT PANELS

The app uses a two-pane layout with a draggable border between them (default split 30:70).

The left hand side of the app is all about selecting sources then creating and filtering links.

The right hand side (the pink tabs) is all about presenting the results.

Left-hand side

- **Project Dropdown Menu:** select a project including its links and documents
- **Sources Dropdown Menu:** choose one or more sources. **(Leaving it empty includes *all* sources).**
- **Create Links tab:** Read and code the text of the selected source(s). If multiple sources are selected, the first is shown.
- **Filter Links tab:** Do qualitative causal analysis on the selected links by filtering and manipulating them.

The Links Pipeline

The diagram shows the Links Pipeline: The top four boxes here correspond to the left side of the app and are called the "Links Pipeline": each step selects and filters links. The resulting links are then displayed in the pink output tabs on the right side.

Right-hand side (pink tabs)

- **Outputs:** these all show the same filtered links from the Links Pipeline but in different formats
- **Map:** visual network of links
- **Factors:** editable factor list (toggle available to bypass analysis filters)
- **Links:** editable links table (toggle available to bypass analysis filters)
- **Pivot Tables:** additional analysis and charts

Right-hand side (other tabs)

The right-hand side also contains other tabs not influenced by the pipeline:

- **Help:** help drawer and docs
- **Projects:** manage projects
- **Sources:** manage sources
- **Settings:** application preferences
- **Account:** your account
- **Logs:** application logs
- **Bookmarks:** saved views
